

PeopleFlow HR

Modern Workforce Management Platform

ENTERPRISE KNOWLEDGE BASE & SYSTEM DOCUMENTATION

This document serves as the single source of truth (SSOT) for the PeopleFlow HR cloud ecosystem. It contains comprehensive system configurations, technical specifications, policy workflows, permissions definitions, and detailed FAQs.

Optimized for semantic search, vector embeddings, high-density token distribution, and automated Retrieval-Augmented Generation (RAG) benchmarking.

Document Version: 4.2.0-PROD

Release Date: May 28, 2026

Target Audience: HR Administrators, Systems Engineers, RAG Chatbot Integrators

Classification: Confidential Enterprise Technical Manual

1. Company Overview & Core Platform Architecture

PeopleFlow HR is an enterprise-grade, cloud-native, multi-tenant Human Resource Software-as-a-Service (SaaS) platform engineered to streamline modern workforce management. By integrating employee lifecycle administration, automated operational payroll routines, compliance framework auditing, talent acquisition pipelines, and deep behavioral analytics into a single unified cloud database engine, PeopleFlow HR serves as the primary system of record for globally distributed enterprises.

1.1 Platform Description & Architecture

The platform is built on an API-first microservices architecture running on secure public cloud infrastructure. It provides organizations with dynamic horizontal scaling capabilities to manage labor forces ranging from 100 to over 100,000 active concurrent employees. The user interface leverages modern responsive web design principles alongside dedicated mobile native wrappers for iOS and Android, ensuring accessibility across desktop terminals, tablets, and mobile field equipment. Central to its design is the *Unified Personnel Ledger (UPL)*, a proprietary high-performance structural schema that ensures real-time synchronicity across payroll engines, benefit structures, tracking registers, and evaluation dashboards.

1.2 Core Modules

The system is comprised of twelve tightly decoupled but structurally integrated functional modules:

- **Core HR & Directory:** Centralized profile inventory, organization chart visualizers, asset provisioning databases, and organizational relationship nodes.
- **Time & Attendance Tracking:** Clock-in terminals, dynamic digital timesheet submittal engines, geographic fencing grids, and automatic shift scheduling matrices.
- **Absence & Vacation Matrix:** Interactive balance accumulation rules engines, holiday scheduling libraries, and automated parallel multi-manager routing hooks.
- **The Payroll Engine:** Multi-currency gross-to-net computation cores, localization tax libraries, compliance filing connectors, and dynamic out-of-cycle disbursement queues.
- **Talent Acquisition (ATS):** Job distribution networks, localized talent pools, visual selection pipelines, resume scanning parsers, and structured interviewing loops.
- **Performance & Engagement:** Matrixed appraisal loops, real-time KPI cascading metrics, peer-to-peer feedback aggregators, and continuous development milestones.
- **Learning & Development (LMS):** SCORM-compliant training nodes, compliance tracking queues, localized training tracks, and continuous career path architecture.
- **Benefits & Compensation Vault:** Flexible plan enrollment modules, carrier billing reconciliation engines, and savings matching calculation profiles.

1.3 Supported User Personas

The system natively optimizes interfaces, access privileges, and workflows for five critical personas. **Frontline Employees** leverage self-service screens to control personal profiles, review pay distributions, check leave tallies, and progress through training tracks. **Line Managers** utilize dedicated dashboards to review team requests, approve operational timesheets, execute assessment workflows, and trigger localized hiring requisitions. **HR Administrators** hold extensive modification mandates over policy logic, profile structures, workflows, and overall personnel data lifecycles. **Payroll Administrators** focus on financial computation ledgers, adjusting local tax

parameters, and executing payment cycle exports. Lastly, **System Administrators** retain total root control over tenant properties, structural integrations, identity verification boundaries, and underlying data retention frameworks.

1.4 Strategic Business Value

By migrating fragmented disparate personnel processes into PeopleFlow HR, organizations realize measurable operational efficiencies. Administrative processing friction falls by up to 65% via automated routing engines; payroll calculation dispute rates decrease significantly due to structural synchronization with real-time tracking engines; and risk parameters soften through systematic compliance gates that enforce regional certifications and mandatory resting breaks across global operations.

1.5 Platform Security Overview

Security is natively embedded into every layer of PeopleFlow HR. The system maintains compliance with SOC 2 Type II, ISO 27001, and FedRAMP high-impact baselines. All data is encrypted in transit via TLS 1.3 and at rest utilizing AES-256 cryptographic keys managed through hardware security modules (HSMs). Multi-tenant isolation is strictly maintained through row-level security (RLS) filters applied at the database abstraction layer, guaranteeing that client transactional datasets are physically and logically segregated from other entities hosted within the shared cluster architecture.

2. Role-Based Access Control (RBAC) & Permissions Matrix

PeopleFlow HR implements an enterprise-grade, zero-trust Role-Based Access Control (RBAC) model. Access to data objects, dashboard metrics, execution buttons, and reporting capabilities is strictly controlled through functional roles mapped to system users. Custom roles can be derived by grouping discrete permission primitives, but the system ships with five highly optimized system-defined baseline roles.

2.1 Core System Roles

- **Employee:** Read-only access to personal profile records, personal leave balance statements, direct learning tracks, and personal compensation documentation. Write access is restricted to self-profile modifications (e.g., telephone number, residential address changes, direct-deposit account entries) and submittal of direct leave or timesheet workflows. No visibility into external coworker profiles or macro organization metrics is permitted.
- **Manager:** Inherits all basic Employee permissions. Grants read access to aggregated and discrete profile fields for all direct reports assigned within the functional org chart hierarchy. Grants write/approve access over subordinate timecards, time-off requests, goal evaluations, and localized milestone performance reviews. Managers cannot modify foundational payroll rules, systemic structural configurations, or access direct peers' compensation metadata.
- **HR Administrator:** Full read and write authority across all profile records, hiring queues, talent metrics, performance history data, and basic organizational configurations. HR Administrators possess authority to initialize onboarding setups, finalize offboarding tasks, and modify general platform policy settings. They do not have access to structural banking routing information, direct cryptographic keys, or system configuration overrides.
- **Payroll Administrator:** Specialized administrative tier holding read and write access to compensation files, benefit deduction variables, localized banking distribution paths, tax code configurations, and historical salary ledgers. Payroll Administrators cannot modify global organizational charts, system login policies, or update performance goal metrics, ensuring proper separation of duties.
- **System Administrator:** The root administrative tier. Full access to system telemetry logs, network boundary properties, integration credential vaults, multi-factor authentication enforcement mechanisms, structural row-level isolation variables, and database archival matrices. System Administrators can impersonate profiles for debugging but cannot alter historical payroll audit rows directly.

2.2 Access Permissions Matrix

The following detailed functional matrix defines the platform access thresholds per system role across key modules:

Functional Area / Object	Employee	Manager	HR Admin	Payroll Admin	System Admin
Personal Demographics	Read / Write (Self)	Read (Directs)	Full Read / Write	Read Only	Full Read / Write
Salary & Compensation	Read Only (Self)	No Access	Read Only	Full Read / Write	Read Only
Timesheet Approvals	Submit (Self)	Approve (Directs)	Full Read / Write	Read Only	Full Override
Leave Policies Layout	Read Only	Read Only	Full Read / Write	Read Only	Full Read / Write
Bank Routing / Direct Deposit	Read / Write (Self)	No Access	No Access	Full Read / Write	Read Only
Performance Metrics	Read / Write (Self)	Read / Write (Directs)	Full Read / Write	No Access	Read Only
System Integration Keys	No Access	No Access	No Access	No Access	Full Read / Write
Audit Log Inspections	No Access	No Access	Read (HR logs)	Read (Pay logs)	Full Read / Write

Security Architecture Enforcement Node

When an evaluation engine or RAG bot requests access rights mapping, always verify that the query token matches the security scope. System Administrators cannot modify tax deduction ledger lines without triggering cross-authorization flags with a Payroll Administrator role instance.

3. Employee Lifecycle: Advanced Onboarding Workflows

The onboarding pipeline in PeopleFlow HR is designed to securely transition an incoming hire into an active, productive contributor. The system leverages automated scheduling and sequential checklist constraints to ensure zero-gap regulatory compliance.

3.1 Systematic Phase-by-Phase Process

- 1. Account Provisioning & Identity Seeding:** Once the Talent Acquisition engine flags an applicant as "Hired - Contract Signed", the system creates a dormant database entry. The structural entity triggers an asymmetric employee GUID. The System Admin service spins up localized user boundaries, establishing an isolated workspace sector.
- 2. Automated Welcome Correspondence:** The communication service fires an encrypted link to the hire's verified personal email address. This message contains temporary single-use access parameters and multi-factor authentication initialization strings valid for exactly 72 hours from generation.
- 3. Digital Document Intake Framework:** Upon first portal landing, the hire enters a secure ingestion wizard. The interface requires uploaded digital captures of identity proof, national tax registrations (W-4, W-2 equivalents, or local tax forms), direct deposit financial credentials, and emergency point-of-contact details.
- 4. Profile Completeness & Verification:** The uploaded documents pass to a dedicated HR Administrator dashboard. The administrator cross-checks data strings against regional regulatory requirements. Once validated, the admin flags the onboarding profile as "Verified", changing status from "Pending Input" to "Active-Imminent".
- 5. Day-One Operational Activation:** At 00:01 on the scheduled start date, the system merges the dormant account into the global corporate org chart, unlocks company single sign-on (SSO) credentials, and publishes baseline corporate training paths to the user's LMS queue.

3.2 Step-by-Step Employee First-Login Protocol

Employees must adhere to the following strict sequencing protocols during initial authentication:

- Navigate to the organization-specific portal URL (e.g., <https://company.peopleflow.hr>).
- Input the temporary user identifier and single-use password supplied in the welcome notification.
- Establish a strong personalized master password conforming to enterprise parameters (minimum 16 alphanumeric characters, upper case, lower case, special keys, no historical dictionary words).
- Bind a hardware-based multi-factor authentication (MFA) token or register a trusted mobile authenticator application via TOTP QR validation.
- Review, digitally sign, and submit the mandatory enterprise handbook acknowledgment and data usage privacy waivers.

3.3 Onboarding Submodule FAQs

Q3.1: An incoming hire reports that their welcome email token has expired. How is this remediated?

A3.1: An HR Administrator must navigate to the "Onboarding Hub", locate the specific applicant record, select the "Actions" dropdown menu, and execute "Regenerate Activation Token". This creates a fresh 72-hour valid secure link and cancels historical strings.

Q3.2: Can a manager modify the day-one onboarding tasks or assign specialized tools before the start date?

A3.2: Yes. Managers can access the "Pre-Arrival Dashboard" for their designated incoming hires and append custom functional checklists or document review queues, provided these additions do not override company-wide mandatory compliance requirements.

4. Employee Lifecycle: Advanced Offboarding & Deactivation Workflows

The offboarding workflow mitigates risk, prevents data exfiltration, and guarantees clean financial separation when an employee leaves the organization. It supports voluntary resignations and involuntary terminations with appropriate operational tracking.

4.1 Offboarding Triggers and Phase Management

Offboarding procedures execute across three distinct vectors: voluntary resignation, involuntary severance, and structural retirement. Each channel dictates specific workflow paths within the system engine:

4.1.1 Voluntary Resignation Workflow

The process initiates when an employee files a formal separation request within the self-service center. The platform logs the precise timestamp and calculates the contractually required notice period (typically two weeks to 30 days based on localized labor contract profiles). The system automatically routes a notice ticket to the direct Line Manager and the regional HR Business Partner. Simultaneously, a dynamic tasks ledger initializes, detailing knowledge-transfer requirements and active hardware asset collection procedures.

4.1.2 Involuntary Termination Protocol

To prevent retaliation and system compromise, involuntary terminations utilize a hidden "Immediate Suspension" or "Scheduled Severance" flag. When triggered by an authorized HR Administrator in conjunction with Legal Counsel, the platform silences outbound alerts. On the target execution millisecond, the identity service instantly kills all active SSO tokens, active mobile profile authentications, API access tokens, and enterprise integrations. This cuts off access to Slack, email, repositories, and corporate servers instantly, prior to or concurrent with the face-to-face termination brief.

4.2 Exit Interviews & Asset Auditing

For standard departures, the portal spins up an exit feedback terminal 7 days prior to the final shift. This survey compiles feedback on culture, leadership, compensation satisfaction, and departure motivations. Concurrently, the system crawls the provisioning ledger to compile a comprehensive asset return checklist (including serial numbers for laptops, security tokens, monitors, keys, and company vehicles). The Line Manager must inspect each physical unit and mark it as "Returned - Pristine", "Returned - Damaged", or "Unreturned - Financial Deductible".

4.3 Final Payroll, Tax Ledgers, and System Cleansing

The Payroll Engine freezes the target account's timesheet on the final work hour, automatically adding accrued but unused vacation balances, deducting outstanding non-returned asset costs, and applying statutory severance parameters. The system generates a final electronic payslip and exports tax document packets (such as Form W-2 or local equivalents). Following the final calculation run, the primary identity record transitions to "Deactivated - Historical Archive" status. This moves the underlying data rows out of operational database tables and places them under data retention holds for regulatory auditing.

4.4 Offboarding Submodule FAQs

Q4.1: A terminated employee claims they cannot access their historical tax forms after separation. How do they retrieve them?

A4.1: Upon status transition to "Deactivated", the system limits the corporate SSO login. However, it opens a restricted personal portal at <https://archive.peopleflow.hr> using the user's verified personal email address. This provides secure, read-only access to historical payslips and tax documents for up to 7 years.

Q4.2: What happens if an employee rescinds their resignation after the workflow has started?

A4.2: An HR Administrator can halt the offboarding workflow via the "Offboarding Command Center" by selecting "Abort Separation Protocol". This reinstates full account viability, provided the formal cancellation occurs before final payroll processing begins.

5. Vacation & Time-Off Management Policy Framework

PeopleFlow HR contains an enterprise rules engine engineered to calculate, track, and enforce paid time off (PTO), holiday cycles, and parental/personal leave allocations across multiple jurisdictions globally.

5.1 Accrual Rules Engine

Accrual logic runs on a nightly cron job that evaluates active employee files against their specific *Leave Accrual Profile (LAP)*. Standard allocations are calculated using three distinct methods:

- **Fixed Annual Milestone:** The total annual allocation (e.g., 160 hours) drops into the employee's balance account on January 1st or the hire anniversary date.
- **Pro-Rata Per Pay Period:** Balance values scale incrementally with each success payroll run. For example, a 160-hour annual profile awards exactly 6.66 hours per semi-monthly payment cycle.
- **Hourly Accrual Multiplier:** Common for variable shift or hourly part-time forces. The engine multiplies approved timesheet hours by a fixed coefficient (e.g., 0.0577 hours of leave earned per hour worked).

5.2 Multi-Manager Approval Routing Matrix

When an employee submits a vacation request, the platform evaluates the organizational hierarchy chart to build an approval chain. For standard employees, requests require single-tier manager approval. For senior staff or critical infrastructure personnel, the system activates a multi-tier chain: Direct Manager approval triggers a secondary notification to the Department Head, which then routes to the HR Absences Clerk if the requested duration exceeds 10 consecutive business days. The system automatically tracks team schedules during submission. If more than 25% of a functional team is scheduled out over overlapping calendar dates, the platform tags the request with a "Coverage Conflict Warning" badge.

5.3 Holiday Calendars & Structural Overrides

The system maps active employees to specific *Regional Holiday Calendars (RHC)* based on their operational cost-center assignments. If an employee resides in the United Kingdom but reports to a US corporate branch, their system honors UK bank holidays for automated timecard overrides. The system dynamically updates holiday tables annually via secure regulatory API sync feeds.

5.4 Vacation Submodule FAQs

Q5.1: Why did an employee's monthly leave balance stop increasing at the end of October?

A5.1: The employee has likely hit their maximum accumulation limit defined within their Leave Accrual Profile. PeopleFlow HR enforces a "Cap-and-Freeze" rule to limit balance liability. Once accrued hours reach the designated ceiling (e.g., 240 hours), accruals freeze until the employee uses hours and drops below the cap.

Q5.2: Can an administrator manually override an employee's vacation balance?

A5.2: Yes. An HR Administrator can perform a balance adjustment via the "Leave Balances Matrix". The system requires a structural reason code (e.g., "Contract Adjustment") and logs a permanent audit entry tracking the user ID, timestamp, and delta changes.

6. Sick Leave & Extended Medical Absence Policies

The platform treats unplanned medical leaves and extended clinical absences with distinct validation protocols to ensure strict alignment with local health privacy frameworks and disability laws.

6.1 Medical Leave Ingestion Procedures

Employees can log sudden sickness via the self-service web dashboard or mobile app. The platform allows instant single-day declarations without medical documentation up to three consecutive occurrences. If an unplanned absence extends past 72 consecutive hours, the platform automatically flags the entry as "Pending Validation" and issues an automated notice requesting formal medical documentation.

6.2 Regulatory Documentation Requirements

To preserve data privacy, uploaded medical notes are routed to a secure, isolated storage bucket separate from standard personnel folders. The platform restricts read permissions for these files to authorized HR Health Compliance Officers; line managers receive only a simplified notification stating "Absence Validated - Medical Extension Confirmed" alongside the approved return-to-work date, hiding all clinical diagnostic data. The underlying document must clearly display a registered medical practitioner's seal, licensing number, and a explicit statement confirming the employee's inability to work during the designated date range.

6.3 Extended Leave & Short-Term Disability Transition

When an illness or medical recovery window surpasses 14 consecutive calendar days, the system triggers the *Extended Medical Leave Protocol (EMLP)*. This workflow moves the user profile off the operational payroll registry and switches them to the Short-Term Disability (STD) calculation matrix. This framework scales down regular salary payments to fixed statutory percentages (e.g., 60% of base salary) or coordinates with corporate insurance providers via API connections, depending on tenant policy settings.

6.4 Sick Leave Submodule FAQs

Q6.1: A manager is demanding to see the doctor's note uploaded by their direct report. Can access be granted?

A6.1: No. Due to health privacy regulations (including HIPAA and GDPR frameworks), line managers are systematically blocked from viewing medical files. Only the HR Health Compliance Officer can view medical files. Managers only see status confirmation flags and return-to-work dates.

Q6.2: How does the system treat sick leave carry-over at the end of the calendar year?

A6.2: Carry-over parameters depend on the assigned Sick Leave Profile. By default, standard sick leave allocations do not carry over and reset on January 1st ("Use-It-or-Lose-It"). However, organizations can configure customized rollover policies to comply with local labor laws.

7. Core Payroll Engine, Calculations & Deductions Architecture

The PeopleFlow HR Payroll Engine processes automated high-velocity compensation distributions. It integrates real-time timecard data, benefit structures, and regional tax tables into a unified payment workflow.

7.1 Payroll Cycles and Calculations Engine

The calculation engine operates on predefined corporate schedules: weekly, bi-weekly, semi-monthly, or monthly. At the scheduled cutoff lock time, the engine halts modifications to timesheets, bonus adjustments, and commissions. The core computation algorithm processes the gross compensation formula:

$$\text{Gross_Comp} = (\text{Base_Hours} \times \text{Base_Rate}) + (\text{OT_Hours} \times \text{OT_Rate}) + \text{Retroactive_Adjustments} + \text{Discretionary_Bonuses}$$

Once Gross Compensation is established, the platform runs localized tax engine calculations to apply statutory withholdings, including federal income tax, state/provincial allocations, social security systems, and national health insurances.

7.2 Overtime and Differential Multipliers

Overtime tracking runs automatically based on regional labor laws. In standard configurations, hours exceeding 40 within a single calendar week trigger a 1.5x pay multiplier. For specialized operations, California rules (over 8 hours per day at 1.5x, over 12 hours at 2.0x) or custom shift premiums (e.g., night-shift differentials adding a 15% flat premium to base hourly rates) apply automatically based on the employee's assigned work location profile.

7.3 Voluntary and Involuntary Deductions Vault

Deductions are grouped into two major functional columns within the payroll ledger:

- **Voluntary Deductions:** Post-tax or pre-tax options controlled by employee enrollment choices, such as 401(k)/retirement contributions, healthcare premiums, flexible spending account (FSA) deposits, or corporate wellness memberships.
- **Involuntary Deductions (Garnishments):** Court-ordered allocations, child support judgements, or statutory tax levies. These entries require a unique legal case reference identifier and hold top processing priority over voluntary benefit selections.

7.4 Payroll Corrections & Retroactive Balances

If a timesheet correction occurs after a payroll period closes, the platform blocks past ledger modifications. Instead, it creates a *Retroactive Adjustment Delta Row* in the current open processing ledger. This applies the correct financial adjustment to the next scheduled pay cycle, preserving historical financial records for audit integrity.

7.5 Payroll Submodule FAQs

Q7.1: What happens if bank routing info is updated while a payroll cycle is actively processing?

A7.1: The system locks direct deposit records once a payroll cycle transitions to "Processing" status. Changes made during this window apply to the following pay cycle. If an urgent override is required, a Payroll Administrator must abort the current calculations, unlock the ledger, update the data, and re-run calculations.

Q7.2: How does the system handle mid-cycle salary adjustments?

A7.2: The engine performs a pro-rata split. It calculates daily earnings under the previous salary rate up to the effective date, and applies the new salary rate for the remaining days of the pay period.

8. Benefits Administration & Employee Wellness Systems

The Benefits Subsystem manages plan configurations, eligibility validation, open enrollment periods, and ongoing life event modifications.

8.1 Open Enrollment Infrastructure and Event Triggers

Open Enrollment is an automated platform-wide event window. During this phase, the self-service dashboard surfaces a benefits enrollment wizard for eligible employees. This wizard walks users through side-by-side health plan options, dental packages, optical tiers, and contribution configurations. Outside of Open Enrollment, benefits selections are locked. They can only be modified through a verified *Qualifying Life Event (QLE)*, such as marriage, divorce, child birth, adoption, or loss of alternative coverage. Employees must submit documentation for a QLE within 30 days of the event to unlock their benefits configuration panel.

8.2 Retirement Savings Framework

The system supports complex corporate matching logic for retirement plans (e.g., 401(k) or international equivalents). Administrators can configure tiered matching rules, such as matching 100% of employee contributions up to the first 3% of gross pay, and 50% for the next 2% of gross pay. The system enforces maximum statutory contribution caps annually, and automatically halts payroll deductions when an employee reaches these limits.

8.3 Employee Assistance Programs (EAP) & Mental Wellness

To support holistic workforce health, the platform contains a confidential Employee Assistance Program (EAP) portal. This section provides self-guided mental health exercises, crisis hotline information, and therapy intake resources. To maintain employee privacy, usage metrics are aggregated at the enterprise level; individual usage records are encrypted and hidden from all corporate administrators and managers.

8.4 Benefits Submodule FAQs

Q8.1: An employee missed the 30-day window to submit a Qualifying Life Event documentation. Can they still update their plans?

A8.1: No. The platform enforces the 30-day regulatory boundary. If missed, the configuration panel locks automatically, and the employee must wait until the next annual Open Enrollment window, unless a manual administrative override is executed by an authorized Benefits Administrator due to extreme corporate exceptions.

Q8.2: How are health insurance premiums deducted if an employee is on unpaid leave?

A8.2: The system initiates an "Arrears Ledger". Unpaid premium balances accumulate weekly/monthly. When the employee returns to active status and restarts regular payroll cycles, the system applies catch-up deductions based on a configured repayment schedule until the balance is cleared.

9. Attendance Tracking, Geofencing & Timesheet Management

The Time & Attendance module records hours worked, tracks shift alignment, manages overtime risks, and exports validated timesheets to the payroll engine.

9.1 Clock-In Mechanics and Geofencing Coordinates

Employees can record shift updates through hardware terminals, web applications, or mobile apps. Mobile clock-ins can be configured to require *Geofencing Verification*. When active, the system checks the mobile device's GPS coordinates against the location radius of the assigned facility. If coordinates fall outside the allowable boundary (e.g., 200 meters), the clock-in attempt is blocked or logged with a "Location Deviation Flag" for manager review, depending on department settings.

9.2 Timesheet Routing Lifecycle

Timesheets follow a structured weekly or semi-monthly lifecycle:

1. **Collection:** The system logs clock-in/out records in real time, factoring in automated unpaid lunch break deductions (e.g., deducting 30 minutes after 6 consecutive hours worked).
2. **Submission:** At the end of the work period, the employee reviews their aggregated hours and signs off digitally, transitioning the timesheet to "Submitted" status.
3. **Review & Approval:** The line manager receives a notification to review the timesheet. They can approve it, or reject it back to the employee with notes if modifications are required. Approved timesheets transition to "Payroll Ready" status.

9.3 Late Arrivals & Shift Deviation Matrix

The system evaluates clock-in timestamps against assigned shift schedules. A configurable *Grace Period* (e.g., 5 minutes) allows for minor delays. Clock-ins past this window trigger a "Late Arrival" flag, which calculates the shift deficit and alerts the manager if patterns exceed corporate thresholds.

9.4 Attendance Submodule FAQs

Q9.1: An employee forgot to clock out yesterday and cannot edit their timesheet today. How is this resolved?

A9.1: Once a timesheet day passes, editing access may restrict based on tenant settings. The employee's manager or an HR Administrator must navigate to the employee's "Timesheet Editor Panel", manually input the missing clock-out time, add an explanatory note, and save the adjustment.

Q9.2: Can geofencing track employee locations throughout their entire shift?

A9.2: No. PeopleFlow HR only reads GPS coordinates at the exact moment of a clock-in or clock-out transaction. Continuous background location tracking is not supported to protect employee privacy and optimize device battery life.

10. Performance Management, Goal Alignment & Evaluation Reviews

The Performance Management module structures performance reviews, goal tracking, and continuous feedback loops to align talent development with organizational objectives.

10.1 Review Cycle Execution Profiles

The platform supports diverse appraisal frameworks: annual evaluations, semi-annual reviews, and continuous quarterly check-ins. Review workflows are configured using multi-perspective evaluation paths, aggregating insights from three core viewpoints: Self-Appraisals, Top-Down Manager Appraisals, and Peer-to-Peer Feedback loops. The system anonymizes peer feedback inputs if requested by company policy configurations before displaying summary reports to employees.

10.2 Goal Setting and Objective Key Results (OKRs)

The OKR framework allows organizational goals to cascade from executive tiers down to department heads, managers, and individual team members. Key results support flexible metrics configurations: percentage completions, currency targets, numerical counts, or binary milestones. When an employee updates an individual key result, the progress updates upstream goals automatically based on configured weights.

10.3 Performance Rating Configurations

The system supports customizable assessment scales, ranging from classic 5-point frameworks to complex matrices. The system includes a *Calibration Engine* that maps employee performance data onto a standard Bell curve distribution across large departments. This provides managers with visual warnings if their team evaluations skew excessively high or low, helping maintain objective standards across the organization.

10.4 Performance Submodule FAQs

Q10.1: A manager finalized an evaluation review but needs to update a rating. Can they unlock it?

A10.1: No. Once a review workflow transitions to "Completed", it locks to protect historical review integrity. To make modifications, an HR Administrator must access the "Performance Cycle Control Panel", locate the specific review record, and click "Revert to Evaluation Phase". This reopens the form for the manager.

Q10.2: What happens to an employee's active goals if they change departments mid-cycle?

A10.2: The system archives active goals under the previous manager's profile. The new manager can choose to import and update those historical goals, or create a new set of objectives tailored to the employee's new role.

11. Recruiting, Applicant Tracking (ATS) & Hiring Approvals

The Talent Acquisition module manages the recruiting lifecycle, from initial job requisitions to candidate screening, interview tracking, and formal offers.

11.1 Job Requisitions and Approval Chains

The recruitment process begins when a Line Manager creates a *Job Requisition Form* detailing the role title, salary band, headcount type, and required certifications. The form routes through an automated approval chain based on department budgets: routing first to the Department Head, then to the Finance Analyst, and finally to the HR Recruitment Director. Once approved, the platform generates a unique tracking code and publishes the posting to configured external job boards and internal career portals via API connections.

11.2 Candidate Pipelines and Interview Management

As applications flow into the Applicant Tracking System (ATS), the system parses resumes to extract work histories, education details, and key skills. Recruiters manage candidates using visual drag-and-drop pipelines: *Applied* → *Screened* → *Interview Loops* → *Offer Extended* → *Hired*. The system syncs with internal calendars (such as Google Calendar or Microsoft Outlook) to automate interview scheduling, sending confirmation links with video conferencing details to candidates automatically.

11.3 Formulating and Extending Job Offers

When a candidate is selected, the recruiter uses standardized templates to generate an offer letter. This document pulls compensation figures directly from the approved job requisition parameters to prevent budget deviations. The letter is routed internally for executive approval before being extended to the candidate via an integrated electronic signature portal.

11.4 Recruiting Submodule FAQs

Q11.1: Why can't a recruiter view an active applicant's evaluation scores?

A11.1: This occurs if the recruiter does not have the necessary permissions within that specific hiring team. Access to interview evaluation metrics is restricted to members of the designated interview loop and authorized talent administrators to prevent bias and ensure data privacy.

Q11.2: Can a closed job requisition be reopened?

A11.2: Yes. An HR Recruitment Administrator can reopen a closed job requisition via the "Requisition Hub". If the headcount allotment has expired, the system will route the request back through the finance approval chain before reactivation.

12. Learning Management System (LMS) & Compliance Training

The Learning and Development module administers educational tracks, compliance certifications, and continuing professional development pathways.

12.1 Mandatory Compliance Automations

When an employee joins the company or switches roles, the system evaluates their role requirements to assign mandatory training paths (e.g., Information Security Awareness or Anti-Harassment modules). The system calculates rigid completion deadlines based on their start date (e.g., within 30 days). The system sends automated alerts at 14, 7, and 2 days before the deadline. If an employee misses a mandatory compliance deadline, the platform flags the profile as "Non-Compliant" and can be configured to alert their manager or restrict access to company systems until completed.

12.2 Certification Lifecycles

For certifications that expire annually or biennially, the platform manages renewals automatically. Exactly 60 days before a certification expires, the system moves the profile into a "Recertification Pending" window and places the required training modules back into the employee's active course queue, ensuring zero coverage gaps.

12.3 Custom Learning Paths

Managers and HR Training Directors can build structured learning paths by combining internal video modules, SCORM packages, quizzes, and external training links. These pathways help employees prepare for promotion tracks, track professional development goals, and build career skills within the organization.

12.4 LMS Submodule FAQs

Q12.1: An employee completed an external training course and needs credit. How is this recorded?

A12.1: The employee can upload a PDF copy of their external certificate via the "LMS Self-Service Center". The submission routes to the HR Learning Administrator, who verifies the certificate and updates the employee's training history record.

Q12.2: Can a manager assign mandatory training modules to their team?

A12.2: Yes. Managers can access the "Team Development Hub", select specific courses from the corporate learning library, and assign them to individual employees or their entire team with a custom completion deadline.

13. Reporting Engine, Analytics Dashboards & Data Export Schema

The platform includes a reporting engine that aggregates data from across modules to deliver business intelligence and workforce analytics.

13.1 Pre-Built and Custom Reporting Operational Framework

The system provides a suite of pre-built reports designed for immediate deployment across four administrative domains:

- **Workforce Demographics:** Headcount tracks, turnover patterns, tenure distributions, and diversity metrics.
- **Payroll and Financial FinTech:** Historical expenditure ledgers, tax disbursement aggregates, and total compensation analyses.
- **Time and Attendance Data:** Absenteeism rates, shift deficit tracking, and cumulative overtime metrics.
- **LMS Compliance:** Assessment completions, outstanding training counts, and certification expiration summaries.

Users can build custom reports using a visual query designer, selecting fields from the database schema and applying filters, groupings, and aggregations as needed.

13.2 Automated Delivery and Distribution Schedules

Reports can be scheduled for automated delivery on daily, weekly, monthly, or quarterly cadences. The reporting engine processes scheduled tasks during off-peak hours, generating files and distributing them via encrypted email or secure SFTP connections according to configuration. To preserve data security, reports filter data dynamically at generation time based on the recipient's permissions role, ensuring they only see data they are authorized to access.

13.3 Export Formats and Schema Rules

The reporting engine exports data in flat formats including CSV, Microsoft Excel (XLSX), JSON, and PDF. JSON exports include complete schema declarations, formatting dates using ISO 8601 standards (YYYY-MM-DDTHH:mm:ssZ) and tracking currencies to four decimal places for financial calculations.

13.4 Reporting Submodule FAQs

Q13.1: A scheduled Excel report delivered to a manager is missing salary columns. Why?

A13.1: The system filters columns dynamically based on the recipient's role permissions at generation time. Line managers are systematically blocked from accessing salary columns, so those fields are stripped from the file automatically during generation.

Q13.2: Can data be exported automatically to an external Amazon S3 bucket?

A13.2: Yes. System Administrators can configure data delivery endpoints within the "Export Integration Panel", establishing automated transfers to corporate S3 buckets using IAM roles and public key infrastructure.

14. Account Security, Identity Federation & Multi-Factor Authentication (MFA)

The platform maintains a robust, enterprise-grade security framework to protect sensitive personnel and financial records from unauthorized access.

14.1 Password Rules and Enforcement Framework

For tenants utilizing native credentials rather than external Single Sign-On (SSO), the platform enforces strict password policies: passwords must be at least 14 characters long and include uppercase letters, lowercase letters, numbers, and special characters. The system checks submissions against known compromised password databases using API validations, rejecting matches automatically. Passwords expire every 90 days, and the system blocks the reuse of any of the user's last 12 passwords.

14.2 Multi-Factor Authentication (MFA) Protocols

Multi-Factor Authentication is mandatory across all administrative and system roles, and can be enforced globally for all users based on company policy. The platform natively supports two MFA vectors:

- **Time-Based One-Time Passwords (TOTP):** Users authenticate using standard mobile authenticator apps (e.g., Google Authenticator or Microsoft Authenticator) via a secure QR code registration process.
- **Hardware Security Tokens:** Supports FIDO2 and WebAuthn standards, allowing users to authenticate securely using physical keys (e.g., YubiKeys) or built-in biometric systems (e.g., Touch ID or Windows Hello).

14.3 Account Lockout and Adaptive Security Alerts

To protect against brute-force attacks, the system locks accounts automatically after 5 consecutive failed login attempts within a 15-minute window. The account remains locked for 30 minutes, or until an administrator unlocks it or the user completes a verified identity verification flow. The security engine evaluates logins using adaptive threat intelligence, triggering mandatory MFA checks and alerting the user if a login attempt originates from an unrecognized device, unusual location, or unexpected IP address range.

14.4 Security Submodule FAQs

Q14.1: An employee lost their phone and cannot access their TOTP MFA codes. How can they log in?

A14.1: A System Administrator or authorized HR Administrator must locate the employee's record within the "User Management Dashboard" and select "Reset MFA Configuration". This generates a temporary, single-use bypass token that allows the employee to log in once and register a new authenticator device.

Q14.2: Can we exclude remote field workers from mandatory MFA requirements?

A14.2: While possible by creating a custom security profile and applying it to specific employee sub-groups, this practice is strongly discouraged as it introduces security vulnerabilities and increases account compromise risks.

15. Integration Ecosystem: Enterprise API, ERP & Single Sign-On (SSO)

PeopleFlow HR connects with your broader corporate IT ecosystem, supporting integrations with ERP platforms, identity providers, and third-party applications.

15.1 Single Sign-On (SSO) Federation

The platform integrates seamlessly with modern identity providers using SAML 2.0 and OpenID Connect (OIDC) protocols. This allows organizations to connect PeopleFlow HR to centralized authentication platforms like Okta, Microsoft Entra ID (formerly Azure AD), Ping Identity, or Google Workspace. When active, user provisioning can be automated using the SCIM 2.0 standard, creating, updating, or deactivating accounts automatically as changes occur within the primary identity directory.

15.2 Enterprise ERP Synchronization

The integration engine supports deep synchronization with major enterprise resource planning (ERP) platforms like SAP, Oracle NetSuite, and Workday. Data transfers run via automated REST API synchronization nodes or secure scheduled SFTP file deliveries. This ensures financial journals, cost center updates, and headcount budgets remain aligned across corporate systems without manual data entry.

15.3 REST API and Webhook Architecture

Developers can build custom applications and integrations using the platform's comprehensive REST API. All API requests must be authenticated using secure bearer tokens via OAuth 2.0 architectures, and traffic is throttled using rate-limiting controls to ensure system performance and stability. Outbound webhooks can be configured to alert external applications automatically when specific events occur, such as `employee.onboarded`, `timesheet.approved`, or `termination.processed`.

15.4 Integrations Submodule FAQs

Q15.1: An API request returns a 429 Too Many Requests status code. What does this mean?

A15.1: This indicates that the integration has exceeded the platform's API rate limits. Enterprise configurations typically cap traffic at 5,000 API requests per hour per tenant. To resolve this, adjust your application's architecture to include request throttling and retry logic using exponential backoff schedules.

Q15.2: Does the platform support automated account creation via SAML JIT provisioning?

A15.2: Yes. If Just-In-Time (JIT) provisioning is enabled within your SAML configuration settings, the platform will create a basic employee account automatically upon their first successful SSO login, pulling user attributes directly from the SAML assertion claims.

16. System Comprehensive Troubleshooting Guide (TS-001 to TS-040)

This section provides technical diagnostics, root causes, and step-by-step resolution steps for administrative and technical scenarios within the PeopleFlow HR platform.

TS-001

Symptom: User encounters "Invalid Credentials" alert repeatedly during initial first-time login attempt.

Root Cause: The temporary password link generated during onboarding has expired past its 72-hour window, or the user's browser has cached an old credential string from a previous attempt.

Resolution: 1. Verify the exact timestamp of account initialization in the Onboarding Hub. 2. If past 72 hours, click "Regenerate Activation Token" to send a new link. 3. Instruct the user to open a private/incognito browser window to bypass local caches before entering the new temporary credentials.

TS-002

Symptom: Employee cannot submit a vacation request; the "Submit Request" button appears greyed out.

Root Cause: The requested dates overlap with an existing time-off entry, or the duration exceeds the user's available balance and negative balances are disabled within their Leave Accrual Profile.

Resolution: 1. Check the employee's time-off calendar for overlapping requests. 2. Verify current balance totals within the Leave Balances Matrix. 3. If a balance deficit exists, either adjust the request duration or have an HR Admin temporarily allow a negative balance for this specific instance.

TS-003

Symptom: Manager reports they cannot view a new direct report's profile on their team dashboard.

Root Cause: The employee's start date is set in the future, or the organizational chart node has not updated its relationships following a structural change.

Resolution: 1. Access the employee's profile and check the "Effective Start Date". 2. Future-dated employees do not appear on manager dashboards until their start date by default. 3. To override, toggle the "Show Future Hires" checkbox within the manager's dashboard configurations.

TS-004

Symptom: Payroll calculation fails for a specific department with an "Unresolved Error Code PR-502".

Root Cause: An employee within that department has a blank or malformed bank routing number, blocking the calculation engine's validation check.

Resolution: 1. Open the department's payroll run logs to identify the specific record causing the failure. 2. Navigate to that employee's banking settings and correct the malformed routing or account number. 3. Select "Recalculate Ledger" to restart the payroll process.

TS-005

Symptom: User is locked out of their account following multiple failed MFA verification attempts.

Root Cause: The time sync on the user's mobile device has drifted, causing the TOTP authenticator app to generate codes that fall outside the server's validation window.

Resolution: 1. Instruct the user to sync the time settings within their mobile device's settings menu. 2. A System Admin must access the User Management Dashboard and select "Unlock Account". 3. If codes continue to fail, reset the user's MFA configuration to allow them to re-register their authenticator app.

TS-006

Symptom: Scheduled monthly payroll reports fail to deliver to the corporate secure SFTP server.

Root Cause: The SFTP server's access credentials or SSH public keys have expired, blocking the platform's automated delivery client.

Resolution: 1. Navigate to the Integration Ecosystem dashboard and select "SFTP Configurations". 2. Click "Test Connection" to view the specific authentication or network error log. 3. Update the SSH key pairs or password credentials, save settings, and select "Resend Failed Reports".

TS-007

Symptom: Mobile app clock-ins fail with a "Geofencing Validation Failure" error for an onsite employee.

Root Cause: The employee's mobile device has location services disabled, or the corporate facility's GPS coordinates are configured incorrectly within the system.

Resolution: 1. Ensure the employee has granted the PeopleFlow HR app permission to access location services. 2. Check the facility's location settings in the Attendance module to verify the latitude, longitude, and radius parameters are correct. 3. If accurate, instruct the employee to step away from structures that might block GPS signals and try again.

TS-008

Symptom: An HR Administrator encounters an "Access Denied" error when trying to view an employee's salary record.

Root Cause: The administrator holds an HR Admin role but lacks the specific Payroll Administrator role assignment required to view compensation fields, adhering to separation of duties principles.

Resolution: 1. Review the system's access permissions matrix. 2. If the user requires access to salary records as part of their dual responsibilities, a System Admin must update their account profile to include the Payroll Administrator role.

TS-009

Symptom: Automated compliance training alerts continue to send to an employee who has completed the course.

Root Cause: The course completion record is stuck in a processing queue, or the employee completed a different version of the module than the one assigned.

Resolution: 1. Access the LMS dashboard and check the employee's course progress status. 2. If stuck in "Processing", click "Force Sync Progress". 3. Verify that the course code completed matches the exact module ID assigned within their compliance track profile.

TS-010

Symptom: Outbound webhooks fail consistently with a "403 Forbidden" response code from the receiver.

Root Cause: The receiving server is rejecting the connection because the webhook signing signature is missing, malformed, or has been updated in the platform but not on the receiver.

Resolution: 1. Check the Webhook configuration panel and copy the active signing secret key. 2. Ensure the receiving application is processing the header signature correctly. 3. Click "Test Webhook Endpoint" to verify connection viability using a simulated payload.

TS-011

Symptom: An employee's benefit deductions do not appear on their current payslip.

Root Cause: The benefit plan enrollment was finalized after the payroll cycle's cutoff lock time, or the effective date of the plan is set to a future payroll period.

Resolution: 1. Check the enrollment timestamp and effective date within the employee's benefits profile. 2. If it missed the current cycle's cutoff, the deduction will apply automatically starting next cycle. 3. If an immediate correction is required, a Payroll Admin can add a manual one-time deduction to the current open ledger.

TS-012

Symptom: A candidate's status transitions automatically to "Rejected" in the ATS pipeline without recruiter input.

Root Cause: The candidate failed a mandatory knock-out question included in the job application form, triggering an automated rejection rule.

Resolution: 1. Open the candidate's application history profile. 2. Review their answers to mandatory qualification questions (e.g., certification requirements or work authorization). 3. If the rejection was a user input error, a recruiter can manually change their status back to "Screening".

TS-013

Symptom: Custom report exports to CSV display garbled characters for accented names or international text.

Root Cause: The data export utility ran correctly, but the user's spreadsheet application is opening the CSV file using an incorrect character encoding (e.g., ANSI instead of UTF-8).

Resolution: 1. Instruct the user to open the file using Microsoft Excel's "Get Data from Text/CSV" utility. 2. Explicitly select "65001: Unicode (UTF-8)" as the file origin encoding type. 3. Alternatively, export the report using the native Excel (XLSX) format, which handles international character sets automatically.

TS-014

Symptom: A manager cannot edit a finalized annual performance evaluation form for a direct report.

Root Cause: The performance cycle has officially closed, locking all submitted forms to preserve evaluation data integrity and prevent unauthorized post-cycle alterations.

Resolution: 1. An HR Administrator must access the specific Performance Cycle configuration dashboard. 2. Locate the employee's evaluation record and select "Revert to Evaluation Phase". 3. This unlocks the form, allowing the manager to update ratings before re-submitting.

TS-015

Symptom: SSO logins fail with a "SAML Response Assertion Signature Verification Failed" error message.

Root Cause: The identity provider's signing certificate has been updated or rotated, but the new public key certificate has not been uploaded to PeopleFlow HR.

Resolution: 1. Access your Identity Provider (e.g., Okta, Entra ID) and export the active SAML signing certificate. 2. Log into PeopleFlow HR using a break-glass local administrator account. 3. Navigate to SSO Integration Settings, upload the new certificate file, and save configurations.

TS-016

Symptom: Hourly employee reports that their approved overtime hours are missing from their current paycheck.

Root Cause: The timesheet for that period was approved after the payroll calculation engine ran, or the hours were logged under an incorrect pay code identifier.

Resolution: 1. Check the timesheet approval timestamp against the payroll run schedule. 2. If it missed the cutoff, the platform will process the delta automatically in the next cycle via a Retroactive Adjustment Row. 3. Verify that the hours were allocated to the correct "Overtime" pay code rather than standard hours.

TS-017

Symptom: Single Sign-On (SSO) logins fail with an "Issuer Mismatch Error" during authentication loops.

Root Cause: The Entity ID URL string configured within the platform does not match the Issuer URL string provided in the Identity Provider's SAML assertion payload.

Resolution: 1. Open the SSO Configuration Panel in PeopleFlow HR. 2. Cross-check the Entity ID string against the Identity Provider's configuration metadata. 3. Update the strings to match exactly (including trailing slashes and protocols), save settings, and re-test authentication.

TS-018

Symptom: An employee's profile status shows "Suspended" but they have not been terminated.

Root Cause: The employee triggered an automated account lockout by exceeding the failed login threshold, or an HR Admin accidentally selected the incorrect status during profile updates.

Resolution: 1. Access the Audit Log to identify what event triggered the status transition. 2. If triggered by failed login attempts, click "Unlock Account" within User Management. 3. If adjusted in error by an admin, open the employee profile, select "Update Status", change it to "Active", and save.

TS-019

Symptom: A manager reports that the "Approve Timesheet" button is disabled for their entire team's submissions.

Root Cause: The current payroll processing window has been officially locked by a Payroll Administrator, blocking further timesheet alterations or manager approvals.

Resolution: 1. Coordinate with the Payroll Team to verify the current calculation cycle status. 2. If the payroll has not been finalized, a Payroll Administrator can temporarily unlock the processing period. 3. This allows managers to complete outstanding approvals before re-locking the cycle.

TS-020

Symptom: New hires do not receive their automated system welcome emails during onboarding initialization.

Root Cause: The corporate email gateway is blocking outbound notifications as spam, or the hire's email address contains a typo in the system database.

Resolution: 1. Check the onboarding record to ensure the personal email address is spelled correctly. 2. Access the system communication logs to verify if the notification was dispatched successfully. 3. If sent but not received, coordinate with IT infrastructure teams to safelist the `noreply@peopleflow.hr` delivery domain.

TS-021

Symptom: Changes to an organization chart structure do not update across the platform immediately.

Root Cause: The platform utilizes an asynchronous caching layer to optimize org chart rendering times, introducing a minor synchronization delay.

Resolution: 1. Wait up to 15 minutes for the automated cache flush cycle to run. 2. If immediate updates are required for testing or verification, a System Admin can navigate to System Maintenance and click "Clear Org Chart Cache" to force a rebuild.

TS-022

Symptom: Employees report they cannot access a newly published training module within the LMS catalog.

Root Cause: The course is configured as "Published" but lacks appropriate eligibility mapping rules, blocking it from appearing in employee catalogs.

Resolution: 1. Open the course settings panel within the LMS module. 2. Navigate to the "Eligibility & Mapping" tab. 3. Ensure the course is mapped to the appropriate roles, departments, or locations, or set eligibility to "All Employees" to make it universally accessible.

TS-023

Symptom: An involuntary termination workflow failed to revoke an employee's system access at the scheduled time.

Root Cause: The termination task queue encountered a network timeout error while attempting to communicate with the corporate Identity Provider API endpoints.

Resolution: 1. Access the Offboarding Command Center and review the error logs for the failed transaction. 2. Immediately use the emergency manual override to suspend the employee's access tokens within PeopleFlow HR and your Identity Provider. 3. Click "Retry Access Revocation Steps" to clear the stuck workflow queue.

TS-024

Symptom: A background check status shows "Error - API Connection Failed" within the ATS module.

Root Cause: The integration credentials or API token for your third-party background screening provider have expired or been deactivated.

Resolution: 1. Navigate to Integration Settings and locate your background check provider's configuration block. 2. Re-enter valid API keys or authenticate the OAuth connection connection. 3. Go back to the candidate's profile and click "Resubmit Background Check Request".

TS-025

Symptom: The platform does not apply an automated meal break deduction to a specific employee's timesheet.

Root Cause: The employee's working duration did not cross the minimum consecutive hour threshold required to trigger the automated deduction rule.

Resolution: 1. Review the employee's precise clock-in and clock-out timestamps for that shift. 2. Verify if the shift met the minimum threshold (e.g., 6 consecutive hours) configured within their regional attendance profile. 3. If it fell short, the deduction rule will not apply automatically.

TS-026

Symptom: Payroll calculations return an "Excessive Net Pay Variance Warning" for an entire pay group.

Root Cause: A systemic deduction variable (such as a company-wide benefits premium change) was applied incorrectly, skewing net calculations across the group.

Resolution: 1. Halt the current payroll run processing. 2. Review recent changes to shared benefit premium scales or tax withholding tables. 3. Correct the calculation variable, clear the active run logs, and select "Recalculate Pay Group Ledger" to verify configurations.

TS-027

Symptom: A manager cannot assign an Objective Key Result (OKR) to a direct report.

Root Cause: The target employee has a future effective start date, or their profile is currently mapped to a different department node within the organizational structure.

Resolution: 1. Check the employee's active profile status and department mapping configuration. 2. Ensure the manager holds appropriate organizational chart authority over the employee's node. 3. If a recent transfer occurred, update the chart relationship to align reporting structures before assigning goals.

TS-028

Symptom: An employee's profile pictures do not display correctly, returning a "404 Image Not Found" placeholder.

Root Cause: The image upload failed to sync with our secure content delivery network (CDN) storage buckets during profile updates.

Resolution: 1. Instruct the employee to navigate back to their profile configuration settings. 2. Click "Remove Current Image" and upload a new file (ensuring it is a standard JPEG or PNG under 5MB). 3. Save updates to trigger a fresh CDN upload synchronization transaction.

TS-029

Symptom: Changes made to a specific leave accrual profile do not update on employee balances immediately.

Root Cause: Accrual profiles calculate balances asynchronously via nightly background cron jobs rather than processing updates in real time.

Resolution: 1. Wait for the scheduled nightly processing cycle to complete. 2. If immediate balance updates are required for testing or contract changes, an HR Admin can access the profile and click "Force Immediate Accrual Recalculation" to update affected accounts.

TS-030

Symptom: A recruiter encounters a "Template Parsing Error" when attempting to generate an offer letter.

Root Cause: The underlying document template contains a placeholder field tag that does not match any active variables within the database schema.

Resolution: 1. Access Document Template Settings in the Recruitment module. 2. Open the problematic template and scan for custom text tags or misspelled variables (e.g., {{base_salery}} instead of {{base_salary}}). 3. Correct the tags to align with the system schema, save changes, and regenerate the offer letter.

TS-031

Symptom: A Payroll Administrator cannot close a processing period, receiving a "Pending Timesheets Present" warning.

Root Cause: One or more employees within the pay group have outstanding timesheets that have not been approved or formally rejected by their managers.

Resolution: 1. Click the warning notification link to open the unresolved items list. 2. Identify the specific employees and their assigned managers. 3. Use the system alert utility to send an urgent reminder to those managers, or use an administrative override to approve the timesheets and allow the period to close.

TS-032

Symptom: An employee cannot view their standard pay stub for a recently finalized payroll run.

Root Cause: The payroll run is complete, but the designated "Pay Slip Publication Date" was configured for a future timestamp.

Resolution: 1. Access the specific Payroll Group control panel and check the publication schedule properties.
2. If set incorrectly, adjust the publication date to the current timestamp to release the pay stubs immediately to employee self-service dashboards.

TS-033

Symptom: SCIM user provisioning integrations fail with an "Attribute Sync Conflict" error from Entra ID.

Root Cause: The user principal name or unique ID maps to a pre-existing record within the platform's historical archive tables, blocking creation of a duplicate row.

Resolution: 1. Search the historical archives to check if a former employee shared that unique identifier string.
2. If found, adjust the new user identity parameters within Entra ID or modify the historical archive mapping to resolve the unique constraint conflict.

TS-034

Symptom: An employee's address changes do not update across integrated external benefit provider portals.

Root Cause: The automated 834 benefit enrollment file transmission queue runs on a weekly schedule rather than transferring updates in real time.

Resolution: 1. Review the scheduled distribution log to see when the next file export is set to transmit. 2. If the update is urgent for coverage verification, a Benefits Admin can access the carrier interface panel and click "Export Ad-Hoc Carrier Update File" to send changes immediately.

TS-035

Symptom: A user cannot complete an LMS assessment; clicking "Submit Answers" triggers a network error placeholder.

Root Cause: The user's active login session timed out while they were completing the assessment, disconnecting their submission from the validation API endpoints.

Resolution: 1. Instruct the user to copy their answers locally to prevent losing progress. 2. Refresh the browser tab and log back into the system portal. 3. Re-enter the answers and submit the assessment within an active login session.

TS-036

Symptom: A manager reports that a peer feedback request failed to deliver to a designated evaluator.

Root Cause: The selected peer evaluator has an inactive profile status or their email address configuration contains an unresolved typo.

Resolution: 1. Open the performance review cycle dashboard and check the status of the request. 2. Verify that the peer evaluator's account profile is active and functional. 3. If correct, resend the evaluation request link via the manual tracking utilities.

TS-037

Symptom: A custom report fails to export to PDF, returning a "Layout Engine Interrupted" system error.

Root Cause: The report contains too many concurrent columns, exceeding the horizontal rendering dimensions of the PDF document layout engine.

Resolution: 1. Open the report configuration settings and remove unnecessary columns to streamline layout. 2. Alternatively, switch the orientation parameter from "Portrait" to "Landscape" within the export settings panel before generating the file.

TS-038

Symptom: An employee's tax calculations show incorrect deductions following a recent state relocation.

Root Cause: The employee's work location profile was updated in their user profile, but their regional tax profile configuration was not updated to match.

Resolution: 1. Access the employee's tax settings panel. 2. Verify that their active tax registration profiles align with their new primary residential and facility addresses. 3. Update the profiles to ensure the correct withholding tax tables apply to future payroll cycles.

TS-039

Symptom: System integration connection tokens expire unexpectedly before their documented expiration date.

Root Cause: A System Admin generated a new master integration credential set, invalidating historical API tokens and keys linked to that integration node.

Resolution: 1. Review the master system audit logs to check for recent security key rotations or credential updates. 2. Update your connected applications with the newly generated token strings to restore API communication channels.

TS-040

Symptom: A direct deposit transmission file is rejected by the central clearing house bank with a "Header Totals Discrepancy" alert.

Root Cause: A manual adjustment row was added directly to the payroll export file after the generation process complete, corrupting the header validation strings.

Resolution: 1. Delete the edited file to protect data integrity. 2. Re-open the payroll module, apply necessary corrections through standard system interfaces, and generate a fresh export file. 3. Transmit the unmodified system file to the bank clearing house.

17. Enterprise FAQ Directory (Q&A Blocks 001 to 100)

This directory contains detailed answers to common user questions, serving as a primary knowledge source for our AI support chatbot and RAG systems.

Q1: How do I change my home address in PeopleFlow HR?

A1: Navigate to your personal dashboard, click "Profile Settings", select the "Personal Info" tab, update your address fields, and click "Save Changes". Your HR Administrator will be notified automatically to verify the update for tax compliance.

Q2: Where can I download my historical payslips?

A2: Go to the "Pay & Compensation" module from your main navigation menu. Select the "Payslips" tab to view, search, and download PDF copies of your historical pay statements.

Q3: How do I request a vacation day?

A3: Navigate to the "Time Off" dashboard, click "Request Time Off", choose your desired leave type, select the start and end dates, add an optional comment for your manager, and click "Submit Request".

Q4: What happens if I don't use all my vacation hours by the end of the year?

A4: Rollover policies depend on your specific Leave Accrual Profile and regional labor laws. Check your balance breakdown on the Time Off dashboard to view maximum carry-over limits or "use-it-or-lose-it" rules that apply to your profile.

Q5: How can I register a new device for multi-factor authentication (MFA)?

A5: Open "Account Security Settings", navigate to the MFA block, click "Register New Device", complete the identity confirmation steps, and scan the displayed QR code using your new authenticator application.

Q6: Why is my timesheet showing a "Late Arrival" flag when I clocked in on time?

A6: This flag triggers if your clock-in timestamp falls past the designated shift start time plus any configured grace period. If you believe this flag applied in error, contact your manager to adjust your shift assignment or clock-in record.

Q7: Can I change my direct deposit bank account information at any time?

A7: Yes, you can update banking details via your Profile Settings. However, changes must be submitted at least 5 business days before the current payroll cutoff lock time to apply to that payment cycle; otherwise, they will apply starting next cycle.

Q8: How do I view my current retirement plan contribution settings?

A8: Go to the "Benefits Administration" dashboard and select the "Retirement Services" tab to view your active plans, current contribution percentages, and historical matching contributions.

Q9: Who can see the medical notes I upload for sick leave verification?

A9: To protect your data privacy, uploaded medical documents are restricted to authorized HR Health Compliance Officers. Your direct manager only receives a basic confirmation flag showing approved absence dates.

Q10: How do I update my emergency contact information?

A10: Navigate to your personal profile, select the "Emergency Contacts" sub-tab, enter the contact's name, relationship, and telephone number, and click "Save".

Q11: Why am I unable to see a job posting that my peer told me about?

A11: The job posting may be configured as an "Internal Only" opportunity or restricted to specific department nodes. Verify your profile settings or check with your recruiting team to confirm eligibility.

Q12: How do I complete a mandatory compliance training module?

A12: Open the "Learning Management System (LMS)" dashboard, navigate to your "Assigned Training Tracks" queue, click on the outstanding module, and complete the video and quiz components before the deadline.

Q13: What should I do if my manager rejects my timesheet submission?

A13: Open the rejected timesheet within the attendance portal, review the feedback comments left by your manager, make any necessary adjustments to your hours or notes, and resubmit the timesheet for approval.

Q14: Where do I find my year-end tax documentation (e.g., Form W-2)?

A14: Tax documents are published in the "Pay & Compensation" module under the "Tax Document Vault" tab as soon as they are finalized by the payroll team.

Q15: Can I request an advance on my upcoming salary payment?

A15: Salary advance policies are determined by company policy settings. If enabled, an "Earned Wage Access" link will appear on your payroll dashboard, allowing you to request early disbursement of a portion of your earned wages.

Q16: How do I submit peer feedback for a coworker's performance review?

A16: When a peer feedback cycle initializes, you will receive a system task notification. Click the task link to open the peer feedback form, complete the evaluation questions, and click "Submit Feedback".

Q17: Why did my account get locked out automatically?

A17: Accounts lock automatically for 30 minutes after 5 consecutive failed login attempts within a 15-minute window to protect against unauthorized access. You can wait for the timer to expire or contact your IT helpdesk for assistance.

Q18: How do I enroll in health benefits during the annual Open Enrollment period?

A18: During Open Enrollment, a prominent banner will appear on your main dashboard. Click "Enter Enrollment Wizard" to step through plan options, compare coverage tiers, and finalize your selections.

Q19: What is a Qualifying Life Event (QLE), and how does it affect my benefits?

A19: A QLE is a significant life change (e.g., marriage, birth, loss of coverage) that allows you to update your benefits selections outside of the regular Open Enrollment window. You must submit your request and supporting documentation within 30 days of the event.

Q20: Can I clock in using the mobile app if I am working remotely?

A20: Yes, provided your department settings authorize remote clock-ins. If geofencing is active, the system will log your location coordinates at the moment of clock-in to verify alignment with your remote work profile.

Q21: How do I update my performance goals mid-year?

A21: Open the "Performance Goals" dashboard, select the specific goal you wish to modify, enter your progress updates or adjust key result targets, and click "Submit for Manager Review" to finalize updates.

Q22: Why is my vacation balance showing a negative number?

A22: This indicates that you have taken more time off than you have accrued, which can occur if your Leave Accrual Profile allows balance borrowing. Future leave accruals will automatically apply to clear the negative balance.

Q23: How do I view my company's holiday calendar schedule?

A23: Navigate to the Time Off module and click "Company Holiday Calendar" to view paid holidays and corporate closure dates assigned to your regional location profile.

Q24: What do I do if I see an incorrect deduction on my payslip?

A24: Review your active benefits enrollments and tax withholding settings first. If the discrepancy remains unresolved, open a help ticket with the payroll team using the "Dispute Payroll Record" option on your payroll page.

Q25: Can I download a copy of my employment contract or offer letter?

A25: Yes, signed onboarding documents and employment contracts are stored securely within your personal profile under the "Document Repository" tab.

Q26: How do I refer an external candidate for an open job posting?

A26: Open the "Internal Career Portal", locate the specific job posting, click "Refer a Candidate", enter their contact details and upload their resume, and click "Submit Referral".

Q27: Why did my learning certificate expire in the system?

A27: Compliance certifications typically require renewal on an annual or biennial basis. The system will automatically add the recertification modules back to your active course queue 60 days before expiration.

Q28: How do I view my direct reports' timesheets as a manager?

A28: Navigating to the Manager Dashboard and selecting the "Team Attendance" tab displays an aggregated grid of all outstanding, submitted, and approved timesheets for your team.

Q29: Can I delegate my time-off approval authority to a peer while I am on vacation?

A29: Yes. Open your profile settings, locate the "Approval Delegation" section, select a temporary delegate, choose the start and end dates, and save settings to route incoming requests automatically during your absence.

Q30: How do I run a custom headcount report for my department?

A30: If you hold appropriate management or HR permissions, navigate to the Reporting module, select "Custom Query Designer", add headcount and department fields, apply your filters, and click "Generate Report".

Q31: What is the maximum file size supported for document uploads?

A31: The platform supports document and image uploads up to 5MB per file, accepting standard formats including PDF, JPEG, PNG, and DOCX.

Q32: Why didn't I receive an email confirmation when my time-off request was approved?

A32: Check your notification preferences within your account settings to ensure email alerts are enabled for time-off updates. Also, check your email spam folder to ensure messages aren't being misrouted.

Q33: How do I update my tax withholding preferences (e.g., Form W-4 updates)?

A33: Go to the "Pay & Compensation" module, navigate to the "Tax Profile" tab, click "Update Tax Form", enter your new withholding allowances or exemptions, and sign the document digitally to submit updates.

Q34: Can I access PeopleFlow HR from a personal computer outside the corporate network?

A34: This depends on your company's security policies. If your platform enforces IP restrictions or conditional access policies, you may need to connect to your corporate VPN to log in securely.

Q35: How do I view a summary of my annual total compensation packages?

A35: Navigate to the "Pay & Compensation" dashboard and select the "Total Rewards Statement" tab to view a visual breakdown of your base salary, bonuses, healthcare investments, and retirement matching benefits.

Q36: What should a manager do if an employee fails to log their time for the week?

A36: Managers can use the "Send Reminder Alert" utility within the Team Attendance dashboard to prompt employees to finalize their time logs, or use manual edit overrides to adjust timecards if necessary.

Q37: Can I sync my team's vacation schedules to my Microsoft Outlook calendar?

A37: Yes. Go to the Time Off dashboard, click "Calendar Integrations", copy your custom calendar feed URL, and import it into Outlook or Google Calendar to view schedules automatically.

Q38: Why is my custom report export stuck in a "Processing" loop?

A38: Large datasets or complex queries can introduce processing delays. If a report takes longer than 5 minutes to generate, the system will process it in the background and notify you via email once the export file is ready for download.

Q39: How do I open a formal support ticket with the PeopleFlow HR technical team?

A39: Click the "Help & Support" icon in the lower corner of the portal, select "Submit Technical Ticket", describe your issue clearly, attach any relevant screenshots or error logs, and click "Submit".

Q40: What happens to my data in PeopleFlow HR after I leave the company?

A40: Your account transitions to "Deactivated" status, moving records to secure historical archive tables. Your data is retained under strict data retention policies to meet regulatory auditing requirements, while personal access is restricted.

Q41: Can a manager modify an approved vacation request for an employee?

A41: Yes. The manager must open the employee's approved request from the team calendar, click "Modify Schedule", adjust the dates or duration parameters, and save the updates. The system will notify the employee automatically.

Q42: Where can I review the company handbook and data privacy guidelines?

A42: Corporate policy manuals and signed compliance waivers are centrally located within the "Document Repository" module, available under the "Shared Company Policies" catalog tab.

Q43: How do I track my progression through a multi-course learning path?

A43: Open your LMS dashboard and select the "Learning Paths" tab to view an interactive roadmap displaying completed courses, modules in progress, and upcoming required classes.

Q44: Why did my health coverage enrollment show a "Pending Carrier Sync" status flag?

A44: This indicates your benefits choices have been verified internally and are queued for transmission to the insurance provider via our weekly electronic data interchange (EDI) file sync.

Q45: How can an administrator unlock an employee account locked out by failed login attempts?

A45: Go to the User Management dashboard, search for the employee's name, open their account settings block, and click "Unlock Profile Account" to restore immediate access.

Q46: Can I opt-out of sharing my peer feedback inputs with review subjects?

A46: Peer evaluations are configured with standard anonymity controls based on company policy settings. If enabled, comments and scores aggregate anonymously before being shared, hiding individual identities.

Q47: How do I configure my shift schedule rotation within the system?

A47: Shift rotations are managed within the Attendance module's "Scheduling Hub". Managers can map employees to predefined rolling schedule patterns or manually build customized team schedules.

Q48: Why did my timesheet apply an automated lunch deduction when I didn't take a break?

A48: The platform enforces statutory rest requirements by applying automated lunch break deductions automatically after a set number of consecutive hours worked (e.g., 30 minutes after 6 hours). Speak with your manager to log manual exceptions if necessary.

Q49: How do I request a formal leave of absence (e.g., FMLA or parental leave)?

A49: Navigate to the Time Off dashboard, select "Extended Leave Requests", fill out the compliance forms, attach any required medical or legal documentation, and click "Submit for HR Compliance Review".

Q50: Can I customize the layout and metrics displayed on my manager dashboard widgets?

A50: Yes. Click the "Edit Layout" gear icon on your dashboard view to add, remove, resize, or rearrange metrics widgets to focus on your preferred team metrics.

Q51: How do I update the expiration date for a candidate's background screening package?

A51: Within the ATS module, open the candidate's active profile folder, locate the background verification card, click the edit icon, update the expiration date parameter, and save your changes.

Q52: Why am I receiving system alerts for a department I do not manage?

A52: This can happen if your user account is mapped to an incorrect organizational chart node or included in an administrative distribution group by mistake. Contact your System Admin to correct your role assignments.

Q53: How do I check if my API integration requests are hitting rate boundaries?

A53: System Administrators can view real-time traffic statistics within the Integration Ecosystem dashboard, including comprehensive API transaction logs and detailed rate-limit usage metrics.

Q54: Can I delete a timesheet record after it has been finalized and processed?

A54: No. To preserve audit trail integrity, processed timesheet records cannot be deleted. Any necessary adjustments must be entered as delta rows in the current open payroll period.

Q55: How do I export an evaluation review summary packet for a promotion board presentation?

A55: Open the employee's performance file, click the "Actions" dropdown menu, select "Export Evaluation History", choose the PDF format option, and download the aggregated summary document.

Q56: What happens if an employee fails a mandatory compliance quiz multiple times?

A56: LMS configurations can enforce a maximum attempt limit. If hit, the course locks automatically, and the employee must contact their training coordinator or manager to reset the module and allow a retry.

Q57: Can we track contractor billable hours separately from standard internal payroll hours?

A57: Yes. By configuring unique pay code profiles and mapping contract staff to distinct contractor tracking roles, you can segregate billable tracking data from core operational employee payroll calculations.

Q58: Why isn't my mobile app showing the geofenced map layout during shift check-ins?

A58: This occurs if your device has weak cellular data connections or if background map rendering settings are restricted. Ensure your app permissions are fully updated and try reconnecting.

Q59: How do I configure tiered 401(k) company matching logic in the benefits vault?

A59: Benefits Admins can build contribution structures via the Benefits Settings dashboard, defining specific employee contribution thresholds and matching percentages within the matching rules engine.

Q60: Can I view an audit log tracking who viewed my personal contact details?

A60: Yes. The system records all profile read transactions in its backend compliance ledger. You can submit a request to your compliance officer to review the audit tracking log for your profile.

Q61: How do I assign a specific interviewer to a candidate loop within the ATS pipeline?

A61: Open the candidate's tracking folder, go to the "Interview Loops" card, click "Schedule Panel", search for the interviewer's name, select an available time block, and click "Confirm Interviewer Assignment".

Q62: Why did an employee's accrual profiles fail to update after an anniversary milestone date?

A62: Check if the milestone triggers are configured for calendar years or exact hire anniversary parameters. If accurate, verify that the nightly background cron processing completed without interruption.

Q63: How do I run an ad-hoc payroll calculation check for a single worker?

A63: Payroll Admins can use the "Off-Cycle Payroll Tool" to select a single employee profile, pull current timesheet metrics, run manual deductions checks, and calculate net payout figures without initiating a full group run.

Q64: Can I configure automated escalation workflows for unapproved timesheets?

A64: Yes. Within Attendance Settings, you can configure escalation timelines (e.g., routing unapproved timesheets to the Department Head automatically if left unaddressed for 48 hours after the period closes).

Q65: Where do I upload my signed digital handbook verification pages?

A65: These are typically ingested automatically during onboarding workflows. If manual submittals are required post-onboarding, navigate to your Document Vault and upload files under the "Compliance Certifications" category.

Q66: Why did a newly created job requisition get flagged with a "Budget Allocation Overrun Alert"?

A66: The recruitment engine validates requisitions against department financial parameters. If the requested salary band exceeds outstanding budget parameters, the system triggers a warning flag and routes the form for executive finance approvals.

Q67: Can we hide specific dashboard widgets from employee self-service panels?

A67: Yes. System Admins can use Portal Interface Settings to adjust default dashboard layouts and toggle visibility configurations for specific employee groups or sub-roles.

Q68: How do I clear historical data rows to satisfy localized data privacy deletion requests?

A68: System Admins can use the Compliance Purge Control Center to execute safe data deletions that erase personal profiles while maintaining required non-identifiable financial entries for tax auditing.

Q69: Why isn't a candidate's resume parsing data appearing in the ATS fields correctly?

A69: This can happen if the resume file uses complex multi-column layouts, image-based text formats, or encrypted PDF structures that block standard text extraction utilities. Try uploading a clean, plain-text document version.

Q70: How do I configure a night-shift pay premium coefficient multiplier?

A70: Navigate to Payroll Shift Rules, create a new differential profile, define the active hours window (e.g., 22:00 to 06:00), input the premium coefficient (e.g., 1.15x for a 15% bump), and map it to eligible team profiles.

Q71: Can employees update their retirement plan contribution percentages multiple times a year?

A71: Yes, the platform supports ongoing updates to retirement savings contribution levels, typically taking 1-2 payroll cycles to apply to deductions calculations based on cutoff dates.

Q72: How do I configure an approval chain for multi-manager routing logic?

A72: Go to Workflow Routing Rules, select the target transaction type (e.g., leave requests), click "Create Routing Chain", and add sequential approval nodes based on your organizational chart relationships.

Q73: What is the purpose of the data validation engine within the payroll calculations core?

A73: This background process scans payroll records prior to calculation runs, identifying anomalies like missing tax entries, blank banking profiles, or extreme hour totals to prevent calculation errors.

Q74: Can a manager log an unplanned medical absence on behalf of a sick employee?

A74: Yes. Managers can access the employee's timecard folder via the Team Dashboard, click "Record Unplanned Absence", select the sick leave classification code, and submit the entry to update schedules.

Q75: Why did a custom report export deliver an empty data file to my inbox?

A75: This occurs if your active search filters are too restrictive or conflict with each other, resulting in zero matching records within the database tables. Review and loosen your filter configurations.

Q76: How do I connect PeopleFlow HR to an Okta instance for single sign-on access?

A76: System Admins can use the SSO Federation configuration panel to input Okta metadata endpoints, configure SAML assertion attributes, and upload the necessary public certificates to link systems.

Q77: Can I restrict an employee's access to the mobile portal while allowing web logins?

A77: Yes, security parameters can be configured via Security Access Controls to toggle mobile application access independently from core web interface access for specific user groups.

Q78: How do I view historical calibration trends for performance metrics over time?

A78: Performance Managers can access the Performance Analytics Hub to view multi-year calibration reports that display historical evaluation shifts across departments.

Q79: Why is a candidate's background check request returning a "Pending Documentation" flag?

A79: This indicates the screening provider requires additional verification materials from the candidate (e.g., address proof or signature forms). The candidate will receive a system prompt to upload documents.

Q80: Can we run simultaneous payroll distributions across different global currencies?

A80: Yes, the platform's multi-currency gross-to-net payroll core supports concurrent processing runs using specialized localization libraries to handle distinct currencies and regional tax tables.

Q81: How do I review all administrative system adjustments applied to user accounts?

A81: System compliance officers can generate a comprehensive "System Configuration Adjustment Audit Log" to view a chronological ledger tracking all administrative data modifications across the platform.

Q82: Why did an employee's benefit enrollment fail to trigger a deduction delta adjustment row?

A82: The plan's effective date configuration may fall past the current active payroll period, meaning the deduction change will apply automatically when its scheduled start date is reached.

Q83: Can I build custom competency frameworks for our annual performance appraisals?

A83: Yes. Performance Managers can use the Appraisal Configuration Panel to design customized competency libraries and map specialized evaluation scales to different departments.

Q84: How do I resolve an outbound SCIM synchronization attribute conflict error?

A84: Review the SCIM schema mappings within your identity provider settings to ensure data attributes align correctly with the platform's expected database fields, correcting any field format mismatches.

Q85: What happens to active timesheets if an employee changes departments mid-period?

A85: The system automatically splits the active timesheet period, routing hours worked prior to the transfer to their previous manager and subsequent hours to their new manager for approval.

Q86: How do I upload standard SCORM training content packages into the LMS module?

A86: LMS Admins can click "Create New Course", select the "SCORM Package Ingestion" option, upload the course zip file, and configure tracking rules before publishing the module.

Q87: Can a manager submit an unprompted out-of-cycle milestone feedback card for a worker?

A87: Yes. If enabled in company settings, managers can click "Record Continuous Feedback" on any direct report's profile to log unscheduled performance updates at any time.

Q88: Why did a scheduled CSV report delivery return an attachment encryption error code?

A88: This can occur if the destination SFTP server or recipient email gateway lacks compatible cryptographic protocol configurations. Review your transport security settings to resolve conflicts.

Q89: How do I update emergency telephone numbers for my entire department via data upload?

A89: HR Admins can use the Batch Data Update utility to download the department's profile template, enter the updated phone numbers, and re-upload the spreadsheet to apply changes in bulk.

Q90: Can we configure localized holiday calendar exceptions for specific facility nodes?

A90: Yes, you can create facility-specific holiday calendars to account for regional closures or local bank holidays, applying overrides to workers assigned to those physical facility locations.

Q91: Why did an employee's direct deposit bounce back from the central clearing house bank?

A91: This typically indicates that the account number or routing code was entered incorrectly. The payroll team will be notified to correct the banking attributes before attempting a manual re-payment.

Q92: How do I add mandatory signature fields to an offer letter document template?

A92: Within the Document Template Editor, you can place digital signature block tags (e.g., `[[candidate_signature_block]]`) into your text templates to embed interactive signature fields automatically.

Q93: Can we configure different account lockout thresholds for system administrators?

A93: Yes, you can build specialized high-impact security profiles and apply more stringent security controls, such as lower failed login thresholds, to administrative and root-access roles.

Q94: Why is my team's timecard compliance tracker widget displaying inaccurate information?

A94: The dashboard widgets refresh periodically throughout the day. If recent timesheet approvals or edits aren't showing up immediately, click the manual refresh icon on the widget to update the data.

Q95: How do I configure tiered vesting schedules for company equity benefit plans?

A95: Benefits Admins can use the Equity Compensation tracker panel to build custom vesting rule sets, defining specific milestone timelines and vesting percentages for equity awards.

Q96: Can an employee view peer evaluation feedback scores before finalizing their self-review?

A96: No. The evaluation engine blocks visibility into peer or manager inputs until the employee completes and formalizes their self-review submission to prevent evaluation bias.

Q97: How do I resolve an outbound webhook endpoint verification connection timeout error?

A97: Ensure your receiving server's firewalls are configured to accept traffic from PeopleFlow HR's designated outbound IP address ranges, and verify that your endpoint handler responds within allowable time windows.

Q98: What happens if an employee fails to sign their year-end tax document waivers?

A98: If electronic distribution waivers are left unsigned, the payroll team will print and deliver physical copies of the tax documents to comply with regulatory requirements.

Q99: How do I clear cached browser cookies causing login loop errors on the portal?

A99: Instruct users to open their browser's security settings, clear historical site data and cookies linked to the platform domain, restart the browser application, and attempt logging in again.

Q100: Can I schedule automated backups of my company's complete HR database records?

A100: Database backups run automatically on continuous, rolling schedules as part of core cloud infrastructure operations. System Admins can use the Data Export Hub to schedule automated weekly downloads of flat data archives to corporate storage buckets.

18. Platform Glossary & Domain Lexicon

This lexicon defines fifty core human resources, technical SaaS, and payroll calculation terms utilized across the PeopleFlow HR platform ecosystem.

- 1. Accrual Profile (AP):** A systemic rule configuration that defines the calculation method, frequency, and maximum caps for employee leave accumulation.
- 2. Applicant Tracking System (ATS):** The module dedicated to managing recruitment pipelines, job requisitions, candidate sourcing, and hiring workflows.
- 3. Row-Level Security (RLS):** A database security architecture that isolates multi-tenant data rows, preventing cross-tenant access in a shared infrastructure.
- 4. Unified Personnel Ledger (UPL):** The primary data schema that synchronizes profile changes across payroll, benefits, and timekeeping modules in real time.
- 5. Qualifying Life Event (QLE):** A regulatory milestone change (e.g., marriage, birth) that unlocks benefits enrollment configurations outside open enrollment windows.
- 6. Geofencing Coordinates:** GPS parameters applied to facility boundaries to validate mobile shift clock-in transactions.
- 7. SCIM Protocol:** System for Cross-domain Identity Management, a standard utilized to automate user provisioning workflows from identity directories.
- 8. Gross Compensation core:** The foundational algorithm that calculates aggregate employee compensation before applying withholdings or deductions.
- 9. Involuntary Deduction:** A prioritized, court-ordered deduction allocation applied to payroll calculations (e.g., garnishments, tax levies).
- 10. Calibration Engine:** An appraisal utility that distributes evaluation ratings across standard distributions to minimize manager bias.
- 11. SCORM Package:** Sharable Content Object Reference Model, an international standard format for e-learning content modules.
- 12. Retroactive Adjustment Delta Row:** A current-cycle ledger entry that processes compensation corrections from previous closed payroll periods.
- 13. Overtime Coefficient:** The payment multiplier applied to hours worked past statutory daily or weekly thresholds.
- 14. Identity Federation:** An architecture linking authentication credentials across systems using SAML 2.0 or OIDC standards.
- 15. Data Retention Hold:** A security classification that locks historical profiles against modification while maintaining them for regulatory compliance.
- 16. Break-Glass Account:** An emergency, high-impact administrative login profile kept outside SSO infrastructure to allow recovery during network outtages.

17. Time-Based One-Time Password (TOTP): An asymmetric, rotating authentication code generated by mobile devices for MFA verification.

18. Job Requisition: A formal headcount authorization request tracking salary bands, department nodes, and hiring approvals.

19. Continuous Feedback Loop: An appraisal framework that allows managers and peers to log unprompted performance updates at any time.

20. Outbound Webhook: An automated API event trigger that sends event notifications to external applications in real time.

21. Multi-Tenant Architecture: A cloud execution model where multiple distinct corporate systems utilize shared compute infrastructure safely.

22. Learning Track: A curated sequence of courses and assessments mapped to a specific role or certification objective.

23. API Token Vault: A cryptographically secure repository utilized to store external connection credentials and API keys.

24. Shift Differential: An additional compensation premium applied to shifts worked outside standard business hours.

25. Data Purge Directive: An administrative utility that executes safe, irreversible deletions of personal records to maintain data privacy compliance.

26. Objective Key Result (OKR): A goal framework tracking qualitative objectives alongside measurable key results.

27. Self-Service Center: The platform portal interface allowing employees to update personal settings and log requests independently.

28. Carrier Billing Reconciliation: An administrative engine matching internal benefits enrollments against insurance invoices to catch billing errors.

29. Grace Period Profile: A timekeeping setting defining allowable check-in delays before triggering late flags.

30. SCIM Sync Schema: The field map determining how attributes transfer between central identity directories and the platform tables.

31. Organizational Hierarchy Chart: The relation model mapping reporting structures and management paths across an enterprise.

32. Form W-4 Tracking Node: The localized configuration data recording national withholding tax allowances.

33. Leave Cap-and-Freeze Rule: A liability control halting further leave accruals once an employee hits their balance ceiling.

34. Automated Lunch Break Deduction: An attendance setting that subtracts rest periods automatically based on shift duration thresholds.

35. Extended Medical Leave Protocol (EMLP): The compliance process transitioning long-term medical absences to disability tracking systems.

- 36. Visual Selection Pipeline:** The ATS dashboard interface tracking candidates through sequential screening phases.
- 37. Dynamic Allocation Tables:** Centralized database indices tracking holiday schedules and location overrides across global regions.
- 38. Out-of-Cycle Pay Disbursement:** A specialized payroll run processing urgent, off-schedule compensation payouts.
- 39. Total Rewards Statement:** An interactive dashboard displaying an employee's comprehensive compensation, benefits, and equity package.
- 40. Regional Holiday Calendar (RHC):** Location-specific holiday tables utilized to automate timecard overrides globally.
- 41. Candidate Evaluation Loop:** The structured assessment sequence utilized by interviewers to log candidate evaluation scores.
- 42. Account Lockout Window:** The duration an account remains locked after repeating failed verification attempts to block brute-force attacks.
- 43. Pre-Arrival Dashboard:** The manager interface utilized to configure task lists and tooling assignments for incoming hires prior to their start date.
- 44. Separation Notice Pipeline:** The workflow tracking departures, notice periods, and knowledge transfer requirements.
- 45. Active-Imminent State:** The profile status assigned to verified new hires whose accounts await day-one activation.
- 46. Voluntary Benefit Selection:** Post-tax or pre-tax benefit programs controlled by employee enrollment elections (e.g., dental plans, FSA accounts).
- 47. Visual Query Designer:** The reporting engine builder interface utilized to construct custom analytical queries against the data tables.
- 48. Adaptive Threat Intelligence:** The security layer evaluating login risk based on geographic anomalies and device footprints.
- 49. Asymmetric Employee GUID:** A unique database string identifier assigned to personnel profiles to ensure data integrity.
- 50. System Telemetry Logs:** Core system event registries tracking operations, integrations, and errors across microservices.

19. Compliance, Data Privacy (GDPR/CCPA) & Audit Log Auditing

The platform embeds comprehensive regulatory compliance protections directly within its data schema, architecture, and administrative operational workflows.

19.1 GDPR & CCPA Data Privacy Management

To meet the stringent requirements of international regulations, including the European Union's General Data Protection Regulation (GDPR) and the California Consumer Privacy Act (CCPA), PeopleFlow HR provides integrated data management tools. Employees can request complete copies of their personal data or execute their "Right to Be Forgotten" through their self-service privacy panels. When an authorized deletion directive runs, the system purges identifiable personal records while automatically maintaining aggregated financial data lines to protect legal tax reporting requirements.

19.2 System Audit Trail Infrastructure

The system records all database modifications and read actions to a non-volatile, immutable compliance ledger. These logs track the user identifier, timestamp, source IP address, and details of the transaction, creating a verifiable audit trail for regulatory inquiries. Audit entries are encrypted immediately upon generation and cannot be modified or deleted by any user level, including global system administrators.

20. Enterprise Technical Support, SLAs & Escalation Matrix

PeopleFlow HR provides global enterprise technical support to maintain platform reliability and address customer issues efficiently.

20.1 Ticket Severity and Response SLAs

Technical support requests are classified into four severity levels based on business impact, each governed by strict Service Level Agreements (SLAs):

- **Severity 1 (Critical):** Complete system outage affecting all users, or core data corruption risks. Initial response guarantee: under 15 minutes, with continuous engineering engagement until resolution.
- **Severity 2 (High):** Key operational features are unavailable (e.g., payroll processing failures) with no viable workaround. Initial response guarantee: under 1 hour.
- **Severity 3 (Medium):** System bugs or functional performance issues with an available workaround. Initial response guarantee: under 4 hours.
- **Severity 4 (Low):** General usage inquiries, minor interface bugs, or template configuration requests. Initial response guarantee: under 24 hours.

20.2 Technical Support Escalation Path

Support requests automatically move through standard escalation paths if they aren't resolved within SLA timelines. Tickets initiate with our Level 1 Tier Support team for initial triage. If unresolved, they escalate to Level 2 Technical Support Specialists for deeper system analysis, and finally to Level 3 Platform Systems Engineering and Core Architecture Infrastructure Teams for source code patches or infrastructure corrections.
